

THE NEED

There is enough food in the world for every child... but
MALNUTRITION
still leads to nearly **HALF** of **UNDER-5 DEATHS**.

1 in 6 children in developing countries
(nearly 100 million)
ARE UNDERWEIGHT.

ONE in FOUR CHILDREN UNDER 5 WORLDWIDE are **STUNTED.**

EACH YEAR, NEARLY 2.7 MILLION CHILDREN UNDER AGE 5

DIE as a RESULT OF MALNUTRITION

STUNTING
CAN PERMANENTLY AFFECT a child's brain development.

High rates of stunting can decrease a country's GDP by up to 8%.

THE HOPE

The economic benefits of **FIGHTING MALNUTRITION**

could be **100x** the cost of the investment.

TRAINING FAMILIES

in improved agricultural techniques and equipping them with drought-resistant seeds provides them with **A SUSTAINABLE SOURCE OF FOOD** for the long term.

PROGRESS THROUGH ADVOCACY

Recent hunger-fighting efforts through the U.S. Agency for International Development (USAID) include:

- » Investments reaching more than 12 million children with nutrition programs and nearly 7 million farmers with agricultural support.
- » Funding the Famine Early Warning Systems Network in 36 countries
- » Reducing stunting through Food for Peace, by up to 30 percent in some program areas

 **YOUR VOICE MATTERS!**
