

Healthy timing and spacing of pregnancies (HTSP) ensures babies are born during a mother's healthiest years, and not born too soon or too close together.

In addition to saving the lives of babies and mothers, it:

**improves nutrition
and prevents stunting**

**increases
educational
attainment**

**reduces poverty and
strengthens household
incomes**

worldvisionadvocacy.org

World Vision is a Christian humanitarian organization dedicated to working with children, families, and their communities worldwide to reach their full potential by tackling the causes of poverty and injustice.
